Trans. of Soverskaya Meditsina (USSR) 1962, v. 25,
no. 1, p. 145-147.

DESCRIPTORS: *Rheumatic diseases, Therapy.

The recurring forms of rheumatic chorea include recurrences of choreic hyperkinesia resembling the trace reactions that follow an episode of rheumatic chorea. With a pseudorecurrence there are no signs of exacerbation of the rheumatic process. Identification of pseudorecurrences is of theoretical value in understanding the pathogenesis of trace reactions. It is also of practical value because they require special anti-rheumatic treatment. The administration of restoratives, sedatives, and soporifics is recommended for pseudorecurrences of chorea. The daily urinary excretion of neutral 17-ketosteroids
in chronic diffuse liver disease is low. The greatest
decrease in daily urinary excretion of 17-ketosteroids
occurs in portal cirrhosis of the liver and with severe
biliary or hepatosplenomegalic cirrhosis. Prednisolone
therapy increases the daily urinary excretion of neutral
